

“AI” & LOSS OF “HUMAN INFLUENCE”!©

by Dan Pemble, Kissimmee, Florida – September 8, 2025

We’ve all heard about the “dangers” of artificial intelligence (AI) that will overrule all of our personal normality’s in life such that we will become “subservient know-nothings” (robots) – completely overtaken by AI! Thereafter, we will be unable to think for ourselves or to accomplish anything that is meaningful! Perhaps such thoughts are a bit extreme – but?

Amongst all the other current “grave” predictions associated with AI is an overreliance on the technology that could result in the loss of human ingenuity & influence; as an example, this would be the case when “generative AI” is utilized for creative endeavors such as writing a thesis for a college student, the result of which is to diminish “normal” human creativity, emotions, etc.

As someone whose hobby is creating short articles about any and every subject that may come to mind at any given time, the creation of similar articles by AI simply would not be the same for a variety of reasons. At my age I am certainly no fan of AI at all and the many other dangers associated with this technology are described on numerous web sites, a couple as listed below. I know that if I were to visit an AI web site for support in writing an article, I would be asked a myriad of questions about my intent for the article, etc., etc. before AI could generate anything at all indicative of the finished product that I had in mind! So, I much prefer to forego what I consider to be a waste of my time on an AI site and simply doing my own thinking & creative writing! In fact AI can never precisely match what is in the human mind - no matter how many more algorithms are developed and embodied in computers! While AI has some positive attributes, its use will continue to suppress traditional “old-school” natural human innovation!

<https://builtin.com/artificial-intelligence/risks-of-artificial-intelligence>

I have now modified my long-used un-registered/fictitious trade mark that has been affixed to many of my articles and videos as follows - to emphasize the fact that all my creations are from my mind and not AI generated.
