

WHEN CAN WE EXPECT COOLER TEMPERATURES IN KISSIMMEE, FLORIDA?®

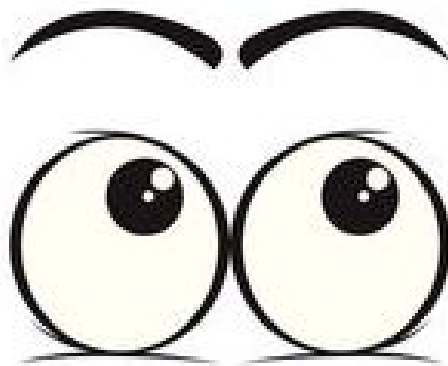

by Dan Pemble, Kissimmee, Florida – 10/2/2026

Certainly we Central Floridians are looking for some relief from our consistently-very-uncomfortable high temperatures and humidity we have dealt with throughout the summer months and are wondering just when this might occur? Well, at the risk of conveying some bad news, the simple answer is: NOT ANYTIME SOON! However, we have seen that the September 22 “fall equinox” has occurred and going forward from September 22nd through December 21st, each day the hours of daylight will get progressively shorter. Shouldn’t these shorter hours of daylight result in some cooler temperatures very soon? Unfortunately, not immediately! Actually, the Kissimmee 10-year average temperatures for the remaining months of 2026, as extracted from a web site posting on September/2026, are shown below.

10-YEAR AVERAGE TEMPERATURES FOR KISSIMMEE, FLORIDA (DEGREES F./C.)

	Hi	Lo
September	88/31	75/24
October	83/28	69/21
November	76/24	62/17
December	73/23	57/14

In looking ahead, let’s keep the faith that perhaps during the remainder of this 2026 year, we will see that the temperatures cool off sooner and beat the above averages!
